Star Wars is fantasy

hydrafalling2

fight me

sci-fi is where the author provides a scientific explanation for a thing

the main theme of Star Wars is the fight between the dark and light sides of the force, which is magical

just because it's set in space doesn't make it sci-fi

Star Wars is fantasy

crimsondragon3073

Uhh incorrect

Theres nothing 'magical' about the light side vs the dark side
You see them throwing fireballs or something of the sort? Nope.
their lightsabers and guns are their technology, making it more science-y than magical
as are the spaceships and whatnot
sorry to burst your bubble but I just can't agree with this

i could consider it sci fi-fantasy though, I'll give you that

adjective
1.
(of a manifestation or event) attributed to some force beyond scientific understanding or the laws of nature.
"a supernatural being"
synonyms: paranormal, psychic, magic, magical, occult, mystic, mystical, superhuman, supernormal; More

Sounds like the force to me

they never give an explanation for telekinesis or literal ghosts

they may not throw fireballs but that's not the definition of magical

It is not fantasy

science fiction

it means that something in technology have not happened yet

some areas of Star Wars are fantasy but mostly sci fi

In my opinion, it's soft sci-fi: closer to the fiction than the science.

the force has laws though. it's also considered a sentient being in sort respects. things aren't automatically 'magic' because we don't understand them

Star Wars is clearly nonfiction

It just takes place a long, long time ago in a galaxy far, far away

The most of the EU is no longer canon; and magic doesn't necessarily have to be lawlesl. I would even go so far as to argue that all magic must have some sort of order, since humans live in an essentially orderly universe and thus cannot comprehend (and thus, cannot write about) pure chaos. Some fictional magics even have detailed and extensive rules and mechanisms, yet are still very clearly magic(most anything by Brandon Sanderson is a good example).

Quibbling about the definition of magic isn't the purpose of this thread, however. The purpose of the thread is to talk about the genre, and this have a decent answer for. It is pretty widely accepted, among the fans at least, that star wars is actually space opera; a genre which is, as far as I can tell, characterized by it's blurring the line between sci-fi and fantasy. Clearly, star wars is such a story, so I believe that the claim that star wars is a space opera is pretty definitive.

no, IIRC expanded universe is just any star wars content that's not part of the movies or TV shows. all such content made before 2015 has been officially made uncanon

(In case the other one doesn't come through)
No, the term "expanded universe" isn't the same as non-canon. Expanded universe material simply refers to all star wars material outside of the films and TV shows(like novels and comic books). Before 2015 there was plenty of canon and non-canon EU material, but with the release of the Force Awakens all EU material made before 2015 was officially made non-canon. However, new EU content has been released since 2015, and I believe that at least some of it is considered canon.

disney decanonized the EU in their bid to remove all positive feelings the human race has ever felt for the star wars faction. Also starwars as a soft sci fi affair that has nothing in common with a fantasy expect for the fact it has something vaguely resembling magic.
